## Claims:

- 1. An assembly comprising:
- a trough element having a trough opening; and
- supports coupled to said trough element and adapted to be attached to an

  apparatus in a manner that causes said trough opening to generally face said apparatus.
  - 2. The assembly of claim 1 where said supports are adjustable to enable said trough opening to be at an adjustable distance from said apparatus.
- 3. The assembly of claim 1 where said supports are adjustable to enable said trough opening to be at an adjustable angle relative to said apparatus.
  - **4.** The assembly of claim 1 where said apparatus is a frame, an equipment rack, or an equipment module.
  - 5. The assembly of claim 1 further comprising one or more detent components that are physical extensions of said trough element.
  - **6.** The assembly of claim 1 further comprising detent elements associated with said trough opening.
  - 7. The assembly of claim 6 where said detent elements include flexible components.
- 25 **8.** The assembly of claim 1 further comprising one or more detent elements that coupled to said trough element.
  - 9. The assembly of claim 1 wherein said trough element is constructed from a pliable material.
